

SECTION 1

General Welfare Requirement: Safeguarding and Promoting Children's Welfare

The provider must promote the good health of the children, take necessary steps to prevent the spread of infection, and take appropriate action when they are ill.

Promoting health and hygiene

1.16 Managing children with allergies, or who are sick or infectious

(Including reporting notifiable diseases)

Policy statement

We provide care for healthy children and promote health through identifying allergies and preventing contact with the allergenic substance and through preventing cross infection of viruses and bacterial infections.

EYFS Key themes and commitments

1.2 Inclusive practice	2.2 Parents as partners	3.2 Supporting every child	
1.4 Health and well-being	2.4 Key person		

Procedures for children with allergies

- When parents start their children at the setting they are asked if their child suffers from any known allergies. This is recorded on the registration form. Where medical needs are identified we ensure we gain information of the condition from parents in the first instance and then from medical professionals where needed.
- If a child has an allergy, a risk assessment form is completed to detail the following:
 - The allergen (i.e. the substance, material or living creature the child is allergic to such as nuts, eggs, bee stings, cats etc).
 - The nature of the allergic reactions e.g. anaphylactic shock reaction, including rash, reddening of skin, swelling, breathing problems etc.
 - What to do in case of allergic reactions, any medication used and how it is to be used (e.g. EpiPen). Parents or a health professional instruct staff in the administration of the medication, these instructions are included in the child's medical details.
 - Control measures – such as how the child can be prevented from contact with the allergen.
 - Review as needed.

- This form is kept in the playroom where staff can see it and an additional copy in the office.
- Generally, no nuts or nut products are used within the setting.

Procedure for children who are sick or infectious

- If children appear unwell during the day – have a temperature, sickness, diarrhoea or pains, particularly in the head or stomach – the manager calls the parents and asks them to collect the child, or send a known carer to collect on their behalf.
- If a child has a temperature, they are kept cool, by removing top clothing, sponging their heads with cool water, but kept away from draughts.
- In extreme cases of emergency the child should be taken to the nearest hospital and the parent informed.
- Parents are asked to take their child to the doctor before returning them to nursery; the nursery can refuse admittance to children who have a temperature, sickness and diarrhoea or a contagious infection or disease.
- Where children have been prescribed antibiotics, parents are asked to keep them at home for 48 hours before returning to the setting.
- After diarrhoea, parents are asked to keep children home for 48 hours or until a formed stool is passed.
- The setting has a list of excludable diseases and current exclusion times this list is displayed in the office.

Reporting of 'notifiable diseases'

- If a child or adult is diagnosed suffering from a notifiable disease under the Public Health (Infectious Diseases) Regulations 1988, the GP will report this to the Health Protection Agency.
- When the setting becomes aware, or is formally informed of the notifiable disease, the manager informs Ofsted and acts on any advice given by the Health Protection Agency.

HIV/AIDS/Hepatitis procedure

- HIV virus, like other viruses such as Hepatitis, (A, B and C) are spread through body fluids. Hygiene precautions for dealing with body fluids are the same for all children and adults.
- Single use vinyl gloves and aprons are worn when changing children's nappies, pants and clothing that are soiled with blood, urine, faeces or vomit.
- Spills of blood, urine, faeces or vomit are cleared using mild disinfectant solution and mops; cloths used are disposed of with the clinical waste.

Nits and head lice

- Nits and head lice are not an excludable condition, although in exceptional cases a parent may be asked to keep the child away until the infestation has cleared.

- On identifying cases of head lice, all parents are informed and asked to treat their child and all the family if they are found to have head lice.

Further guidance

- Managing Medicines in Schools and Early Years Settings (DfES 2005)
